

AutoDrain

Experts in vehicle depollution and fuel recovery

Fuel Tank Drill

The quickest way to remove fuel from End of Life Vehicles

Efficient

Reversible drill bit which keeps consumable costs low.

Built in swarf filter.

Unique water and sediment separation system, ensuring you only retrieve clean and reusable fuel.

Versatile

Only one drill needed for both steel and plastic tanks.

Suitable for use with both petrol and diesel.

Plugs directly into most fuel recovery systems.

Easy to use

Drill is lifted pneumatically to meet the fuel tank.

Safe to use

Non-sparking, low rev, high torque drilling system.

AutoDrain's Fuel Tank Drill can be used in conjunction with our Workshop Fuel Scavenger to provide suction. If your vehicle processing volume increases, it can also be used with our Fixed Fuel Scavenger to pipe the fuel directly to remote storage tanks. At AutoDrain our modular systems allow us to meet your specific depollution needs.

Fuel Tank Drill

Single and double options available

AutoDrain's Unique water and sediment separation system is included as standard with your Fuel Tank Drill. This ensures that you retrieve clean, reusable fuel from End of Life Vehicles. This separation system also serves a dual purpose as a sight glass. Both single and double options are available depending on your business needs.

Fact!

Petrol is a highly explosive material and working with it is a potentially dangerous activity. The Fuel Tank Drill ensures that you drain fuel in a safe way as it does not use a spike to pierce the tank. No drip trays are used, as these can cause a lethal build up of petrol vapour that cannot disperse safely.

TRAINING

Training is vital to ensure that you maximise the profitability and longevity of your Fuel Tank Drill.

Certificated training available at our own IMI accredited training centre.
