

VapourSafe

The safest way to store contaminated fuel

Safety:

Fully compliant with all regulations monitored by the Health and safety Executive and the Environment Agency, Trading Standards, the Fire Service and insurance companies.

Features:

Robust steel construction integrally banded with no further bunding required.

Bund Monitoring

Designed to be moved easily with a forklift truck

No Installation required

Unique sealed vapour transfer system

Specifications:

All Steel Construction
990 Litre Capacity
Height 1200mm
Length 1900mm
Width 900mm
Net Weight 550kg
Filling and Empty Points

Brass fittings
Vapour Venting with Flame Arrester
Dipstick
Forklift Base

VapourSafe Fuel Recovery and Storage

Explosive fuel vapours can undoubtedly cost lives. Every litre of petrol can generate 15,000 litres of petrol vapour. Just a single static spark can cause an explosion with devastating effects.

Fuel vapours are heavier than air and can quickly fill a building. AutoDrains VapourSafe Fuel Storage Tank is a sealed unit that stores fuel safely. Used along side the Workshop Scavenger it forms a system which eliminates dangerous vapours during the transfer of fuels.

Not only does our system remove much of the risk associated with transferring fuel it also meets all compliance requirements.

As a further benefit this entirely compliant system is also time saving and efficient.

AutoDrains Unique sealed vapour transfer system creates a safe working environment.
