

# AutoDrain

Experts in vehicle depollution and fuel recovery

## Shocker

### Oil recovery from vehicle shock absorbers

#### Fully Compliant

The draining of shock absorbers is compulsory under the Environment Agency Legislation. The Shocker will help ensure that you meet all of the required regulations. Some dismantlers and ATF's have ignored this requirement in the past, but with mounting regulatory pressure from the Environment Agency, the requirement cannot be ignored.

#### Quick and easy

A stand alone unit that can drain a shock absorber in as little as one minute!

#### Suitable for all types of shock absorbers

Oil, gas and gas over oil

#### Compact and Robust Unit

Easy to store and will last for years, with minimum maintenance.

**Safe, easy removal of oil shock absorbers**

- Stand alone compressed air system.
- Combines suction and gravity for clean, fast oil removal.
- 90 litre storage capacity
- Consists of a pneumatic drill and a hydraulic tool to puncture the shock absorber allowing the majority of fluid to be sucked through the piercing tip.
- Residual fluid is then extracted through the punctures hole with a suction probe.
- Incorporates a seal to minimise fluid leakage, keeping your workshop clean

# Shocker

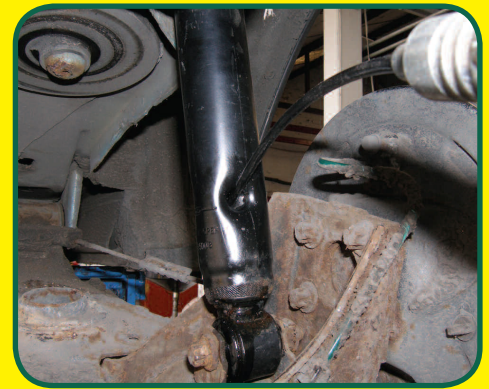

**Easy to use, robust and effective machine**

**Pneumatic drill**

**Hydraulic Punch**

**Removes residual oil**

**The recommended approach is to drain the fluid from the shock absorber without removing it from the ELV.**

**If the shock absorber is removed it is classified as hazardous waste, therefore preferable to drain in situ.**

## **FACT!**

All vehicles must be processed to ensure that potential pollutants such as fuel, oils, brake fluid and other liquids are removed, collected and stored.

Operators will need to ensure that depollution of vehicles are carried out in a way that minimises both environmental and Health and Safety risks.

## **AutoDrain Training**

Training is vital to ensure that you are maximising the profitability and longevity of your Shocker and we have the following training options available for you:

Free online training information and video

Certified training at our own ATF in Leeds

Certified training on your site

**Price on application**
